SUMMARY

Independent software developer with a background in civil engineering, drawn to work that makes complex technical systems legible to non-technical audiences. Leads AI tooling development at an engineering firm, shipping agents and automations that real coworkers use daily, while independently building and deploying full-stack web apps and games end-to-end. Passionate about making an impact with career, especially in ensuring responsible procedures and guidelines are incorporated with the growth of AI technology and its role in our society.

EXPERIENCE

Project Engineer, AI Committee Lead | BKF Engineers, Walnut Creek, CA 2025 – Present

- Lead the firm's AI Committee, scoping, building, and sharing internal AI tools
- Coordinated and collaborated with design specialists in construction support for multi-million dollar projects throughout the Bay Area to address urgent questions that require technically dense responses
- Designed a Power Automate + SharePoint system that reads client email attachments and auto-populates RFI/submittal tracking logs with due-date calculation and reminders.
- Produces civil design deliverables (grading, drainage, utility layouts) in AutoCAD Civil 3D across multiple projects

Engineering Consultant | WSP, San Francisco, CA 2022 – 2025

- Deputy-managed a consultancy project for training and onboarding of technical staff, coordinating professional development of training tools and procedures.
- Automated data analysis and reporting workflows to streamline QA processes for large-scale infrastructure projects, while serving as primary client liaison on a multi-year transit agency engagement.
- Presented findings to key stakeholders and communicated concept procedures and technical requirements to non-technical staff

INDEPENDENT SOFTWARE PROJECTS

RAG-Civil: Web-based AI Tool | Claude, Retrieval Augmented Generation, FastAPI

- Built an AI chat tool for answering technical questions based on submitted documents. The FastAPI backend chunks and vectorizes document information, and compares that to the vectorized question to feed into the model for contextualized answers.

Reango Shipping: Full-Stack Web App | Django, React, PostgreSQL, Railway, Vercel

- Designed and shipped a full-stack shipping/logistics app end-to-end: Django REST API backend, React frontend, deployed independently on Railway (API/DB) and Vercel (frontend).

Ladder Up: HTML5 Game | JavaScript, Facebook Instant Games

- Built a browser-based game from scratch and integrated the Facebook Instant Games SDK for publishing, including Facebook developer account and platform setup.

SKILLS

Languages & Frameworks: Python, JavaScript, Django, React, Node.js/Express

AI & Automation Tools: Copilot Studio, Claude Code, Power Automate

Platforms & Tools: Git/GitHub, Docker, Railway, Vercel, IBM Cloud Code Engine, VS Code

EDUCATION & CERTIFICATIONS

Bachelor of Science, Civil Engineering — University of California, Davis, June 2022

IBM Full Stack Software Developer Professional Certificate
